KESO Omega

Optimum key copying protection for all KESO systems (European Patent no. 0621384).

Patented copying protection provided by interactive mechanics in the key.

Optimum mechanical copying protection.

KESO Omega

Locking systems containing KESO Omega technology provide maximum security. The interactive mechanics in the key and cylinder are available for new systems and coded individual locks in the 1000S Omega, 2000S Omega, 3000 Omega and 4000S Omega systems.

Omega technology impresses due to the two spring-mounted interactive pins in the keys. The key's interactive mechanics activate the corresponding Omega bolt in the locking cylinder. This patented mechanical system considerably increases copying protection.

The cylinder range with Omega technology is available in all systems. Each system also features the eight different key designs as well as colour caps in eighteen different colours.

Benefits

- Copy protection
- European Patent no. 0621384
- Compatibility
- Complete cylinder and key range for new systems and coded individual locks
- Can be combined with mechatronic products

KESO Omega technology for all types of key, including long or extra long keys and colour caps in eighteen different versions for each key.

1000S Omega, 2000S Omega, 3000 Omega and 4000S Omega systems
