

The key to your world.

EURO CHANGE CODE

The **KESO2000S** or **2000S** *omega EuroChangeCode* mechanical security cylinder with three adjustable locks.

«Lost your keys?»

«Already changed the code.»

The key to your world.

EURO CHANGE CODE
KESO2000S or
KESO2000S omega

ADVANTAGES

- 3 locks in one security cylinder
- Changed locks can be recoded again at any time
- Purely mechanical system
- Increased security if keys are lost
- User key is also the configuration key
- Based on either the KESO2000S oder KESO2000S omega

KESO2000S or 2000S omega EuroChangeCode

The cylinder for the three locks, which can be freely and purely mechanically encoded. Flexibility and security characterise these innovations for the European market. Changing from one lock variant to another is incredibly simple and can be carried out easily by the user. The cylinder can be changed in just a few seconds and access using the «old» key is no longer possible.

The KESO EuroChangeCode security cylinder is only available as a coded single lock made of chrome-nickel steel with hardened tumbler pins. Additional drill protection (ABS) is available at extra charge. Recoding the lock can only be carried out from the outside of the cylinder. All keys supplied with the lock fit from the inside.

APPLICATION

Anywhere that lost keys are assumed to be a given. Security can be restored immediately by resetting the lock. The keys for the inactive locks should be kept safely.

Coding the lock

The user key for access 1 is inserted, turned 45° clockwise and removed in this position.

The user key for access 2 is inserted in the 45° position end turned anticlockwise until it is vertical again. After removing the key for access 2, the cylinder is coded for this access, access with key 1 is blocked. The keys for access 2 take over the normal lock functions.

The third access lock can be coded using the user key for access 3.
