Announcing 56ml KESO Spray (G0.992/56/10)

Dear KESO Customer,

We are pleased to introduce our new KESO Spray. Featuring a new formula, this spray has now been developed with the care of KESO mechatronic and mechanical locking cylinders in mind.

KESO Spray protects cylinder inner workings from corrosion and lubricates both KESO mechanical cylinders and KESO KEK mechatronic locking cylinders. This new care spray does not stick and its new formula ensures it is suitable for use at temperatures as low as -25° C. We explicitly advise you to only use the KESO spray for the KESO cylinders. If you use it on any different products, the product liability claim will no be longer significant.

The new KESO Spray is sold exclusively in a practical, ten-canister cardboard pack, which converts into a counter-top display. It is now available for order using item code G.992/56/10.

Key info in brief:

- New formula
- Over 20% less mechanical wear on the cylinder
- Care for both mechanical and mechatronic cylinders
- Can be used down to - 25° C
- Practical counter-top display pack with care instructions in three languages
- Item order code G0.992/56/10, ten-canister pack
- The old multi-purpose spray G.990/75 must no longer be used on mechatronic cylinders.
- Use the new KESO Spray G0.992/56/10 only on mechatronic cylinders
- Only dispose the KESO spray for KESO cylinders.

We thank you for your kind attention and for placing your trust in KESO products.

Best regards,
KESO AG
