

Press Release

July 2010

New security systems, integral solutions and innovations in an all-inclusive selection for doors

KESO AG was founded in 1963 and stands for typical Swiss thoroughness and quality in the development and construction of security systems. Since 2004, it has been part of the Swedish ASSA ABLOY Corporation, which is a worldwide leader in security technology. The brands KESO, IKON and effeff will be exhibited in an innovative overall presentation and integrated, comprehensive concepts and solutions for doors will be showcased.

The special advantages of the intelligent mechatronic locking solution IKON VERSO CLIQ will be presented at the trade fair. VERSO CLIQ is a mechatronic locking system without additional cabling and power supply on and in the doors.

The structures of medical-social facilities are becoming ever more complex and are undergoing constant change. This makes it possible to easily install elements such as the mechatronic VERSO CLIQ cylinder in existing or new doors or cabinets. The fitting process is limited to the simple installation or replacement of the cylinder. And an individual matrix with a timeframe can already be programmed for each employee and each cylinder and the user has seamless process control over all events in the cylinder and keys.

Another big advantage of the system is that nearly all cylinder types are available in mechatronic form. Examples include furniture cylinders, locking cylinders, pressure cylinders and switch cylinders as well as padlocks.

Visit us from 26 – 29 October 2010 and form your own impression of our solutions and expertise. We look forward to welcoming you.
